# If only barns could talk

It all started a century or two ago. Trees were cut down manually—with axes. Then from the timbers the hefty beams and boards were cut.

It was a similar process for all the buildings on the homestead: house, barns and sheds or outbuildings. Everything was hand cut and structured using the tried and true mortise and tenon system. Many of the buildings stood for a century or more.

Today, with less farming and as these buildings continue to age some are restored close to their original state and others are felled or disassembled piece by piece, so that as much as possible, the precious natural resource—the wood, can be reclaimed.

After the structure is disassembled, the lumber is hauled to the lumber handling yard where it undergoes a cleaning and drying process. All the lumber is run under a metal detector twice where the nails are marked and removed, then stacked for drying.

It is then kiln-dried to 7% moisture and also to exterminate all the bugs and insects as the lumber moves closer to being useable for handcrafted reclaimed barnwood furniture.

The barnwood process is an excellent green way to preserve the old and vintage and give the precious natural resource—wood—a second life.

# If only barns could talk

It all started a century or two ago. Trees were cut down manually—with axes. Then from the timbers the hefty beams and boards were cut.

It was a similar process for all the buildings on the homestead: house, barns and sheds or outbuildings. Everything was hand cut and structured using the tried and true mortise and tenon system. Many of the buildings stood for a century or more.

Today, with less farming and as these buildings continue to age some are restored close to their original state and others are felled or disassembled piece by piece, so that as much as possible, the precious natural resource—the wood, can be reclaimed.

After the structure is disassembled, the lumber is hauled to the lumber handling yard where it undergoes a cleaning and drying process. All the lumber is run under a metal detector twice where the nails are marked and removed, then stacked for drying.

It is then kiln-dried to 7% moisture and also to exterminate all the bugs and insects as the lumber moves closer to being useable for handcrafted reclaimed barnwood furniture.

The barnwood process is an excellent green way to preserve the old and vintage and give the precious natural resource—wood—a second life.

# If only barns could talk

It all started a century or two ago. Trees were cut down manually—with axes. Then from the timbers the hefty beams and boards were cut.

It was a similar process for all the buildings on the homestead: house, barns and sheds or outbuildings. Everything was hand cut and structured using the tried and true mortise and tenon system. Many of the buildings stood for a century or more.

Today, with less farming and as these buildings continue to age some are restored close to their original state and others are felled or disassembled piece by piece, so that as much as possible, the precious natural resource—the wood, can be reclaimed.

After the structure is disassembled, the lumber is hauled to the lumber handling yard where it undergoes a cleaning and drying process. All the lumber is run under a metal detector twice where the nails are marked and removed, then stacked for drying.

It is then kiln-dried to 7% moisture and also to exterminate all the bugs and insects as the lumber moves closer to being useable for handcrafted reclaimed barnwood furniture.

The barnwood process is an excellent green way to preserve the old and vintage and give the precious natural resource—wood—a second life.

Item #201-3620560  
Grove Server  
36"H x 20-1/2"D x 60"W

# If only barns could talk

It all started a century or two ago. Trees were cut down manually—with axes. Then from the timbers the hefty beams and boards were cut.

It was a similar process for all the buildings on the homestead: house, barns and sheds or outbuildings. Everything was hand cut and structured using the tried and true mortise and tenon system. Many of the buildings stood for a century or more.

Today, with less farming and as these buildings continue to age some are restored close to their original state and others are felled or disassembled piece by piece, so that as much as possible, the precious natural resource—the wood, can be reclaimed.

After the structure is disassembled, the lumber is hauled to the lumber handling yard where it undergoes a cleaning and drying process. All the lumber is run under a metal detector twice where the nails are marked and removed, then stacked for drying.

It is then kiln-dried to 7% moisture and also to exterminate all the bugs and insects as the lumber moves closer to being useable for handcrafted reclaimed barnwood furniture.

The barnwood process is an excellent green way to preserve the old and vintage and give the precious natural resource—wood—a second life.

## Stain Options

**Standard Colors** BASE PRICE

*Includes any OCS and FC Stains*

**Premium Colors** ADD 15%

*Includes any two-tones, glazes, paints and custom finishing.*

## Caring for details ON DOORS & DRAWERS

**Full Extension Drawer Slides** are standard. They extend fully (beyond the front of the chest), for easy access to the whole drawer. *Undermount soft close slides available upon request.*

**Tandem Plus Blumotion Soft Close Undermount Drawer Slides** are available.

**Soft Close Door Hinge.**

**Reverse Raised Panel Door.**

**Breadboard Door.**

## Added Value

If desired, Nail and Knot Holes can be filled with Epoxy for a smoother user experience.

## Caring for details ON TABLES

**Equalizer slides** are designed for pedestal base tables. The gear track causes them to open in both directions at the same time balancing the weight evenly.

**Two leaf storage** with equalizer slides.

Note: Max self-storing leaves on all table styles in this catalog is two. *Specify with or without skirt.*

**Ungear track.**

**Two leaf storage** with ungear track.

Our hefty **Corner brace Removable Leg System.** Standard on all leg tables.

**Lever lock.** Installed on all Extendable Tables for easy side access.

## Tabletop Edge Options

## Standard Table Heights

Dining height: 30"  
Counter height: 36"  
Bar height: 42"

**3-Drawer Nightstand**

# If only barns could talk

It all started a century or two ago. Trees were cut down manually—with axes. Then from the timbers the hefty beams and boards were cut.

It was a similar process for all the buildings on the homestead: house, barns and sheds or outbuildings. Everything was hand cut and structured using the tried and true mortise and tenon system. Many of the buildings stood for a century or more.

Today, with less farming and as these buildings continue to age some are restored close to their original state and others are felled or disassembled piece by piece, so that as much as possible, the precious natural resource—the wood, can be reclaimed.

After the structure is disassembled, the lumber is hauled to the lumber handling yard where it undergoes a cleaning and drying process. All the lumber is run under a metal detector twice where the nails are marked and removed, then stacked for drying.

It is then kiln-dried to 7% moisture and also to exterminate all the bugs and insects as the lumber moves closer to being useable for handcrafted reclaimed barnwood furniture.

The barnwood process is an excellent green way to preserve the old and vintage and give the precious natural resource—wood—a second life.

## Stain Options

**Standard Colors** BASE PRICE

*Includes any OCS and FC Stains*

**Premium Colors** ADD 15%

*Includes any two-tones, glazes, paints and custom finishing.*

## Caring for details ON DOORS & DRAWERS

**Full Extension Drawer Slides** are standard. They extend fully (beyond the front of the chest), for easy access to the whole drawer. *Undermount soft close slides available upon request.*

**Tandem Plus Blumotion Soft Close Undermount Drawer Slides** are available.

**Soft Close Door Hinge.**

**Reverse Raised Panel Door.**

# If only barns could talk

It all started a century or two ago. Trees were cut down manually—with axes. Then from the timbers the hefty beams and boards were cut.

It was a similar process for all the buildings on the homestead: house, barns and sheds or outbuildings. Everything was hand cut and structured using the tried and true mortise and tenon system. Many of the buildings stood for a century or more.

Today, with less farming and as these buildings continue to age some are restored close to their original state and others are felled or disassembled piece by piece, so that as much as possible, the precious natural resource—the wood, can be reclaimed.

After the structure is disassembled, the lumber is hauled to the lumber handling yard where it undergoes a cleaning and drying process. All the lumber is run under a metal detector twice where the nails are marked and removed, then stacked for drying.

It is then kiln-dried to 7% moisture and also to exterminate all the bugs and insects as the lumber moves closer to being useable for handcrafted reclaimed barnwood furniture.

The barnwood process is an excellent green way to preserve the old and vintage and give the precious natural resource—wood—a second life.

## Stain Options

**Standard Colors** BASE PRICE

*Includes any OCS and FC Stains*

**Premium Colors** ADD 15%

*Includes any two-tones, glazes, paints and custom finishing.*

## Caring for details ON DOORS & DRAWERS

**Full Extension Drawer Slides** are standard. They extend fully (beyond the front of the chest), for easy access to the whole drawer. *Undermount soft close slides available upon request.*

**Tandem Plus Blumotion Soft Close Undermount Drawer Slides** are available.

**Soft Close Door Hinge.**

**Reverse Raised Panel Door.**

**Breadboard Door.**

## Added Value

If desired, Nail and Knot Holes can be filled with Epoxy for a smoother user experience.

## Caring for details ON TABLES

**Equalizer slides** are designed for pedestal base tables. The gear track causes them to open in both directions at the same time balancing the weight evenly.

**Two leaf storage** with equalizer slides.

Note: Max self-storing leaves on all table styles in this catalog is two. *Specify with or without skirt.*

**Ungeared track.**

**Two leaf storage** with ungeared track.

Our hefty **Corner brace Removable Leg System.** Standard on all leg tables.

**Lever lock.** Installed on all Extendable Tables for easy side access.

## Tabletop Edge Options

## Standard Table Heights

Dining height: 30"  
Counter height: 36"  
Bar height: 42"
